Wireless Bar Code Material Transfers

Add efficiency to your business with PDA interfaces and bar code applications

Now you can input and retrieve valuable information from your Epicor™ system whenever and wherever you are with our customized mobile computing solutions.
Our bar code and PDA applications are Microsoft-based, and run on Pocket PC devices. You don't have to have an existing Web site linked to your Epicor system. Our applications are stand-alone, so there is no additional software required for you to use our applications. All updates to your database use your existing ManFact™, DataFlo™ or Avanté™ business rules, so you can be assured of the integrity for every transaction.

Take a closer look at Wireless Bar Code Material Transfers

Use this application for moving product using wireless bar code scanning devices. Bar code scanning and verification of product transfers is critical for improving your overall inventory accuracy.

This screen guides you through a paperless material transfer environment as follows:

First, you scan or enter the part number to transfer. Note that the ⟨Part#⟩ button can be used to quickly and conveniently find the part number or to trigger an inventory quantity lookup.

If the part is bin stocking controlled, the "From" bin location is then scanned. Note the ⟨FROM Bin⟩ button can be used to conveniently and quickly list bins that contain the part being moved. The location tied to the bin automatically displays on the screen. The destination bin location is then scanned.
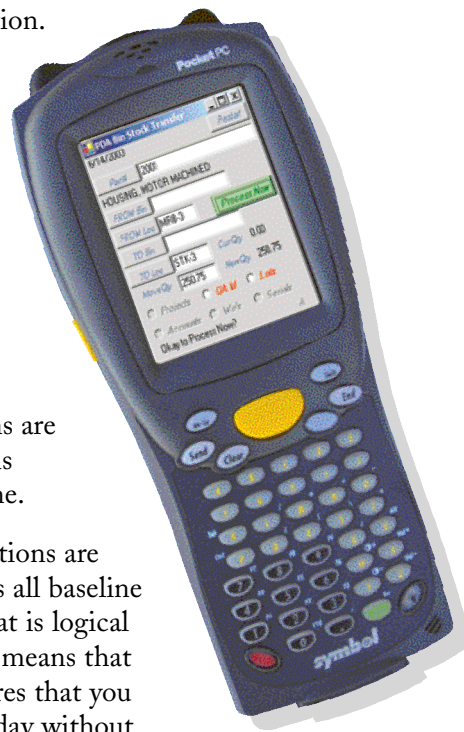

You now enter the quantity to move. The system calculates and displays the quantity that will exist after the move.

If additional information is required, red highlighted radio buttons will appear. In this example, a QA Id and lot number are needed to process the transaction. For other transactions, you may need to specify a project number, work order number, serial numbers, etc. When you click on the appropriate button, a selection screen will appear for scanning or selecting the required information.

When you click the ⟨Process Now⟩ button, final update validations are performed and the inventory is updated online and in real time.

Although custom tailoring options are available, this process supports all baseline stock transfer functionality that is logical for mobile applications. This means that regardless of the system features that you use, you can start scanning today without any custom changes!
