featuring Microsoft® .NET framework-based applications.

EDI that's easy to use

Take advantage of all the benefits of EDI without complications. For over ten years, we've been developing easy-to-use, automated and cost-effective Electronic Data Interchange solutions for Epicor systems using GENTRAN, the software package from Sterling Commerce. EDI solutions can automate sales orders, cash applications, purchase order releases, advance ship notices and more. For instance, here are some typical EDI scenarios:

- You receive purchase orders from your trading partners. Our software solutions can automatically create the sales orders for you and schedule them for production and shipment. Transactions received with errors will automatically be placed on hold or routed to the quotation module for manual review and correction.
- You want to send Advance Shipment Notices or Invoices to your trading partners. As you process shipments, our solutions can automatically retrieve the information from ManFact™, DataFlo™ or Avanté™, and automatically generate and transmit the information.
- You want to automatically send Purchase Orders and Change Orders. Our solutions can allow each buyer to manage their own documents, giving them needed visibility and controls to ensure receipt and confirmation of transactions.

Our EDI solutions provide fully integrated transaction support with your Epicor software system. This not only eliminates manual data entry and improves accuracy, but it can also save your company hundreds of labor hours annually.

Already have an EDI translation package installed? No problem. We also work on existing EDI systems like Trusted-Link, STX, UserBase and others.

Above illustration shows the easy-to-use graphical user interface from GENTRAN: Server.
