EXTERNAL DATABASES

Connect with Microsoft Office products

Enhance your company image. Make forms more appealing. Add your logo to all your documents. Turn financial information into colorful graphs. You can do this and more with Office Link.

Office Link allows you to seamlessly link your Epicor system with Microsoft Office products online and in real time. No more uploading and downloading ASCII files, no more incompatibility problems. As you type or with a touch of a button, you can automatically access, create or update Microsoft Word, Excel, Outlook® and PowerPoint® documents. Here are just a few of the things you can do:

- With Word – Customize invoices, sales proposals, quotations, contracts and shop documents

- With Excel – Jazz up budget planning, financial statements, CAD system interfaces, sales forecasts analysis and reporting

- With Outlook – Fax or email transactions, messages and documents directly from your Epicor system using any networked workstation

- With PowerPoint – Make sales presentations, customer proposals, catalogues and materials for tradeshows, meetings and seminars more professional looking

Connect with multiple databases

Now you can integrate your ManFact™, DataFlo™ or Avanté™ system with other databases quickly and easily. We can make online, real time seamless interfaces to databases like Microsoft Access, Microsoft SQL Server™, Oracle® and others. For example, as you enter a work order, or create an ECO, you can update a parallel engineering database written in Oracle immediately without doing any extra work.

With multiple database connectivity, you can have the best of all worlds – sharing information with all of the databases your business needs.

See how QSS can make your system revolve around your business.
