Wireless PDA Inventory Inquiry

Add efficiency to your business with PDA interfaces and bar code applications

Now you can input and retrieve valuable information from your Epicor™ system whenever and wherever you are with our customized mobile computing solutions.

Our bar code and PDA applications are Microsoft-based, and run on Pocket PC devices. You don't have to have an existing Web site linked to your Epicor system. Our applications are stand-alone, so there is no additional software required for you to use our applications. All updates to your database use your existing ManFact™, DataFlo™ or Avanté™ business rules, so you can be assured of the integrity for every transaction.

Take a closer look at PDA Inventory Inquiry screen

This application is used to quickly view inventory details from your ManFact, DataFlo or Avanté system.

To obtain inventory details on a specific part, you begin the process by entering or scanning a part number. A list of inventory locations where the part exists will be displayed, including On-Hand and Available quantities at the location. The total count for all locations is displayed in the header.

If the part is lot controlled, you may drill-down to view On-Hand and Available lot balances at any location by clicking on the desired location. If the part is serial controlled, you can drill-down to view the existing serial numbers for the selected lot or location.

Additional Features

In a lot-controlled environment, this screen provides the ability to inquire for a part that you need balances for by simply scanning the lot number.

In a bin-controlled environment, clicking the Bin button will display a list of all bin locations where the part exists, and the on-hand quantity existing in each bin.

By leaving the part number blank, you can enter or scan a bin location or inventory location and the system will respond with a list of part numbers that exist at the desired location.

See how QSS can make your system revolve around your business.
